

# Dext

Dext gives you the tools, data and time to provide additional services to even more clients. For firms planning to expand in the next year, Dext provides a foundational platform to power growth, efficiency, and service for your customers.

## Dext Commerce

with Greenback

Dext Commerce allows businesses to simplify, standardise and streamline their digital sales accounting and bookkeeping.

### ✓ Consolidation and standardisation of sales platform data

Fetch line-by-line transactions from retailers, marketplaces, e-commerce platforms, point of sale systems, payment providers and more. Converts financial transaction data into a standard format for a seamless integration with your chosen accounting system.

### ✓ Automation

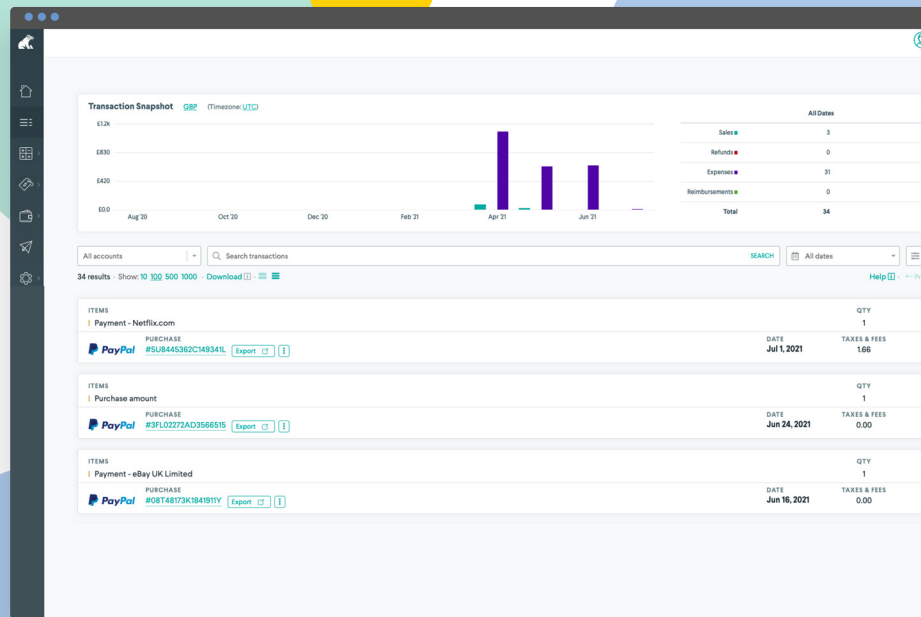

Automatically distribute your sales, expenses, receipts and invoices to accounting systems and business applications. Accounting for e-commerce sales is cumbersome, with most currently using journal entries to properly account for ecommerce sales and fees. Instead, Dext Commerce allows you to take a no hands approach to your digital sales data.

### ✓ Legislation

E-commerce sellers, regardless of size, tend to sell globally. This introduces many compliance challenges. Dext Commerce removes the friction of tax compliance by correctly allocating the appropriate tax rate for the transaction.

### ✓ Real-time reconciliation

Receive sales data in real-time to correctly assess cut off date, cash and accrual based accounting methods, deferred revenue and more. Dext Commerce allows you to be in a better position to provide clients with more than just compliance services, arming accountants and bookkeepers with data and reporting that can help you advise your clients to optimize and grow their revenues.
